

# INDICATE

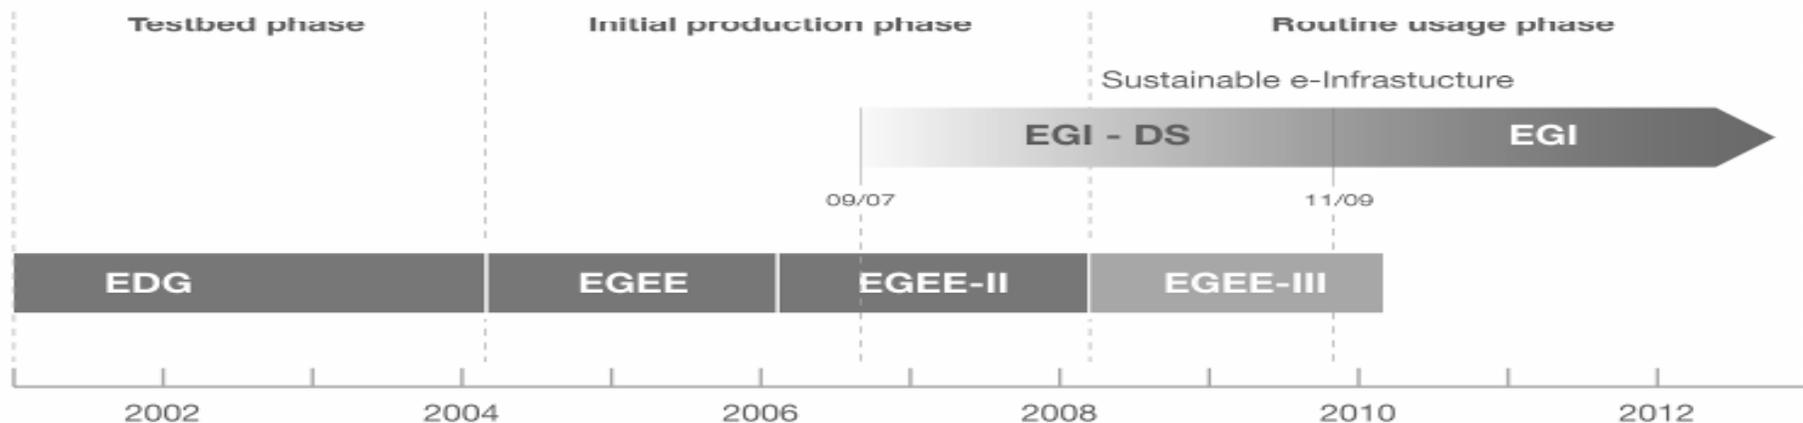

*International Network for a  
Digital Cultural Heritage e-Infrastructure*

**Riunione DC-NET Italia  
Roma, 24 Gennaio 2011**

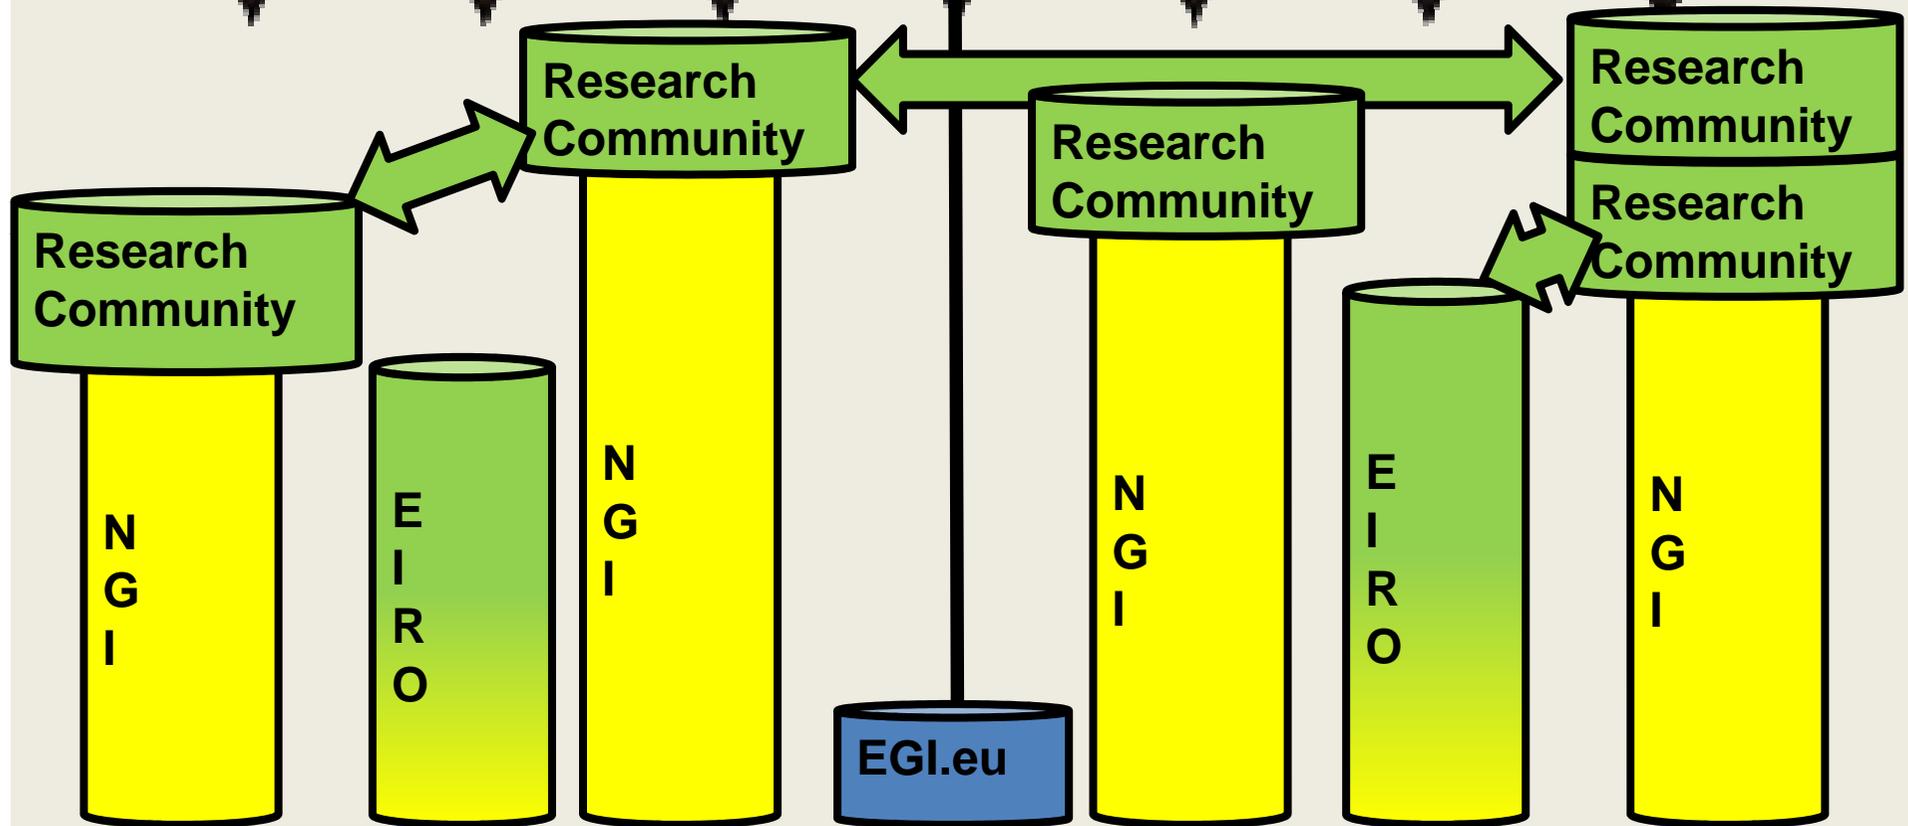

Roberto Barbera  
Consorzio COMETA

- Introduction;
- The INDICATE project:
  - Objectives, Workplan, Partners;
- COMETA and its Services for Cultural Heritage:
  - gLibrary and gLibrary Mobile;
- COMETA vs. DC-NET and INDICATE;
- The INDICATE Virtual Organisation;
- The INDICATE e-Culture Science Gateway;
- Summary and Conclusions:
  - Proposal for an INDICATE Service Challenge.

- European Data Grid (EDG) → [www.edg.org](http://www.edg.org)
  - Explore concepts in a testbed
- Enabling Grid for E-science (EGEE) → [www.eu-egee.eu](http://www.eu-egee.eu)
  - Moving from prototype to production
- European Grid Infrastructure (EGI) → [www.egi.eu](http://www.egi.eu)
  - Routine usage of a sustainable e-infrastructure

# EGL.eu

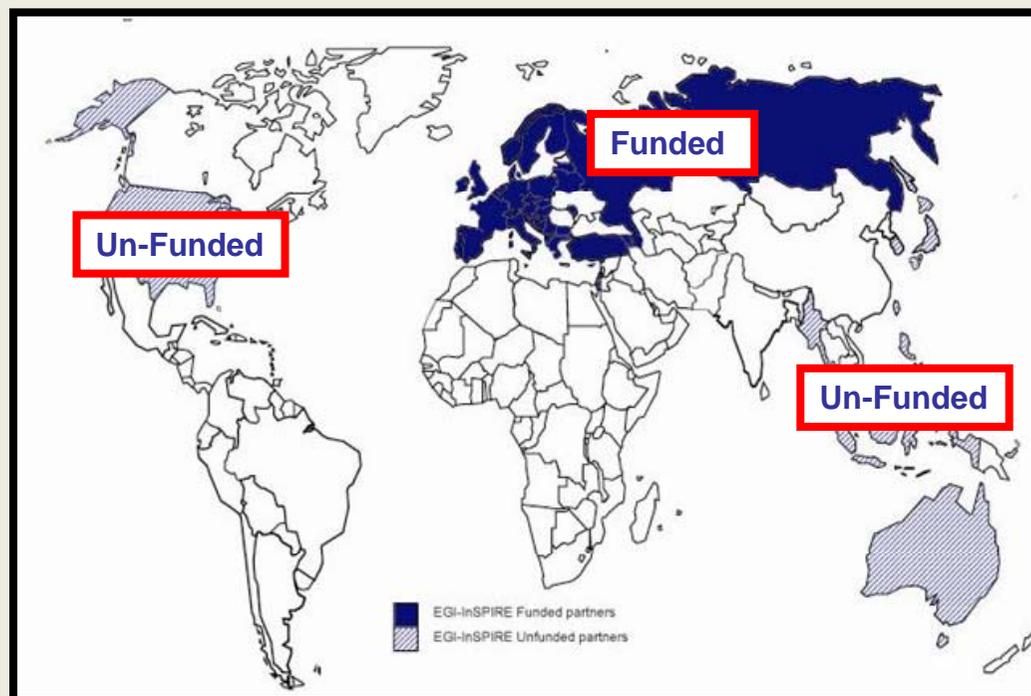

## Integrated Sustainable Pan-European Infrastructure for Researchers in Europe

A 4 year project with € 25 M EC contribution

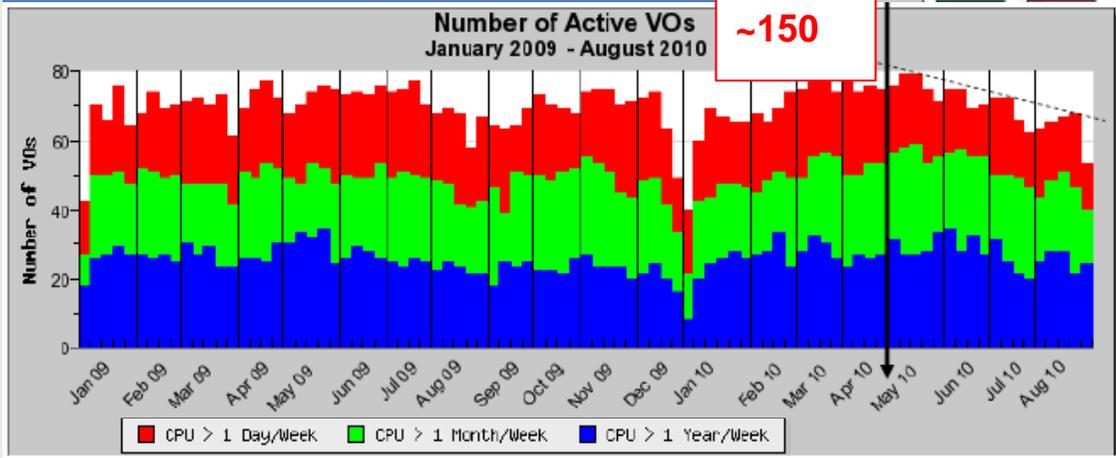

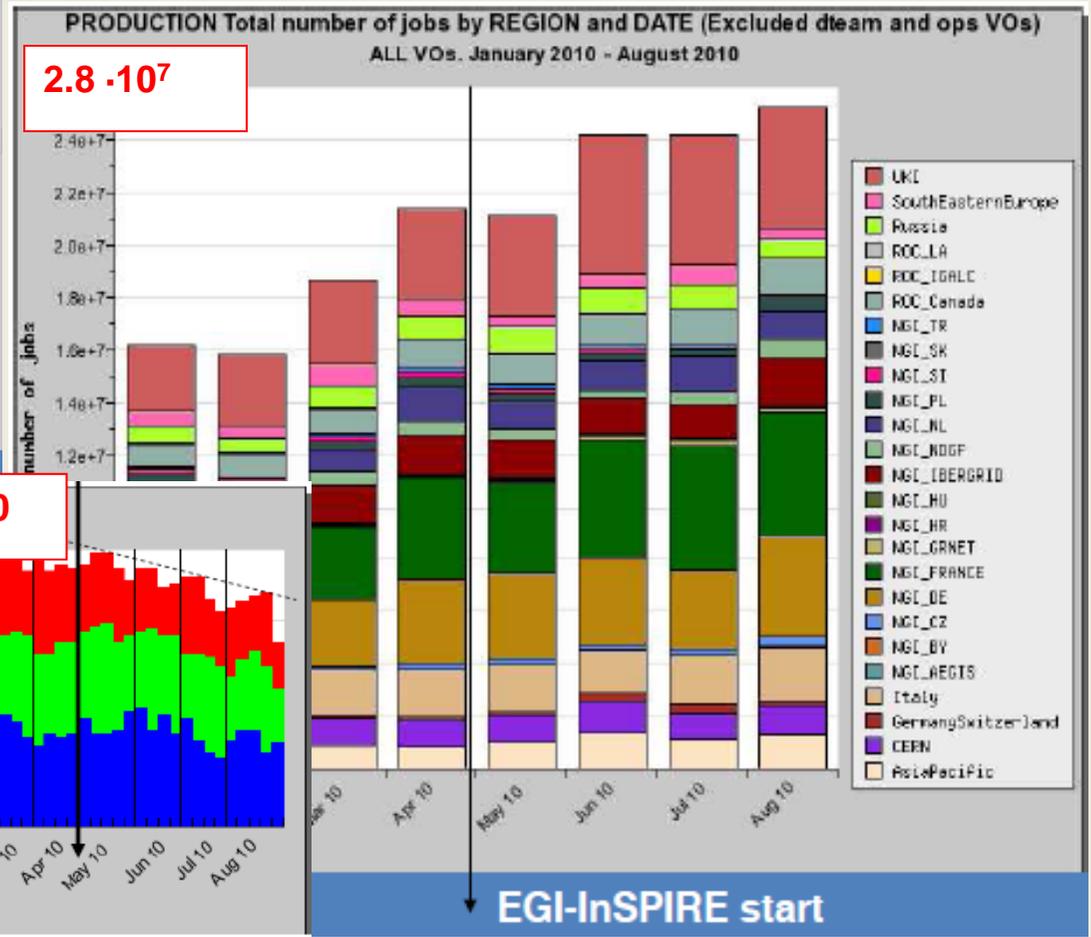

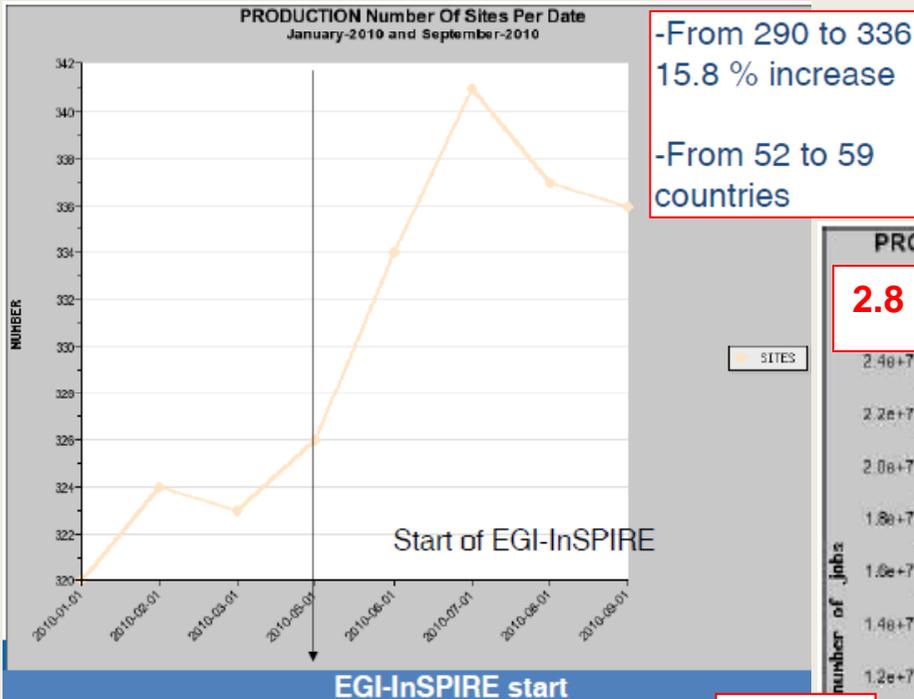

- Project cost € 72 M
- Total Effort ~ € 330 M
- Effort: 9261 PMs

### Project Partners (51)

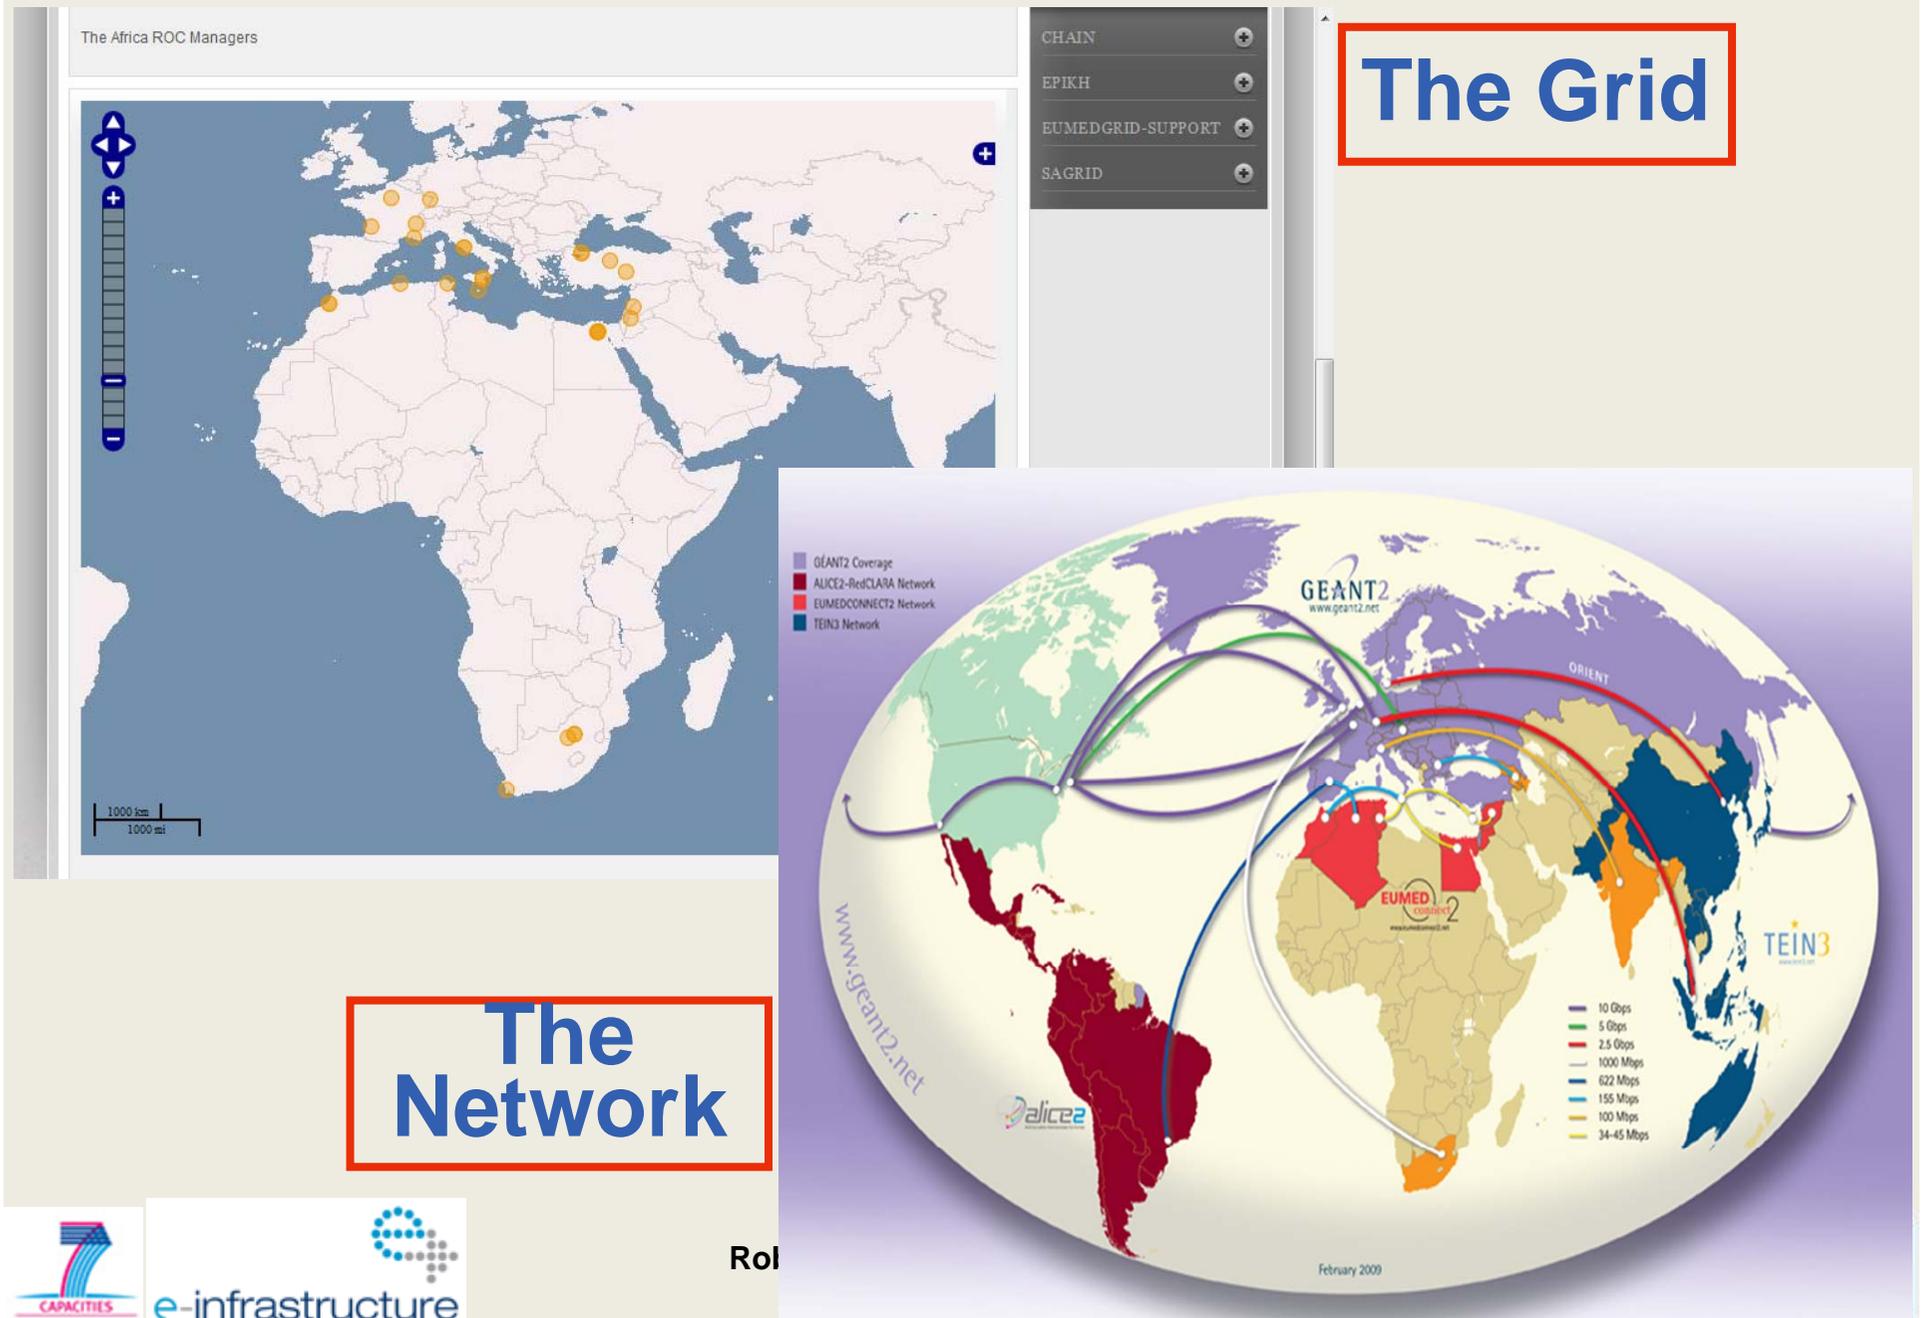

- EGI.eu, 40 NGIs,
- 2 EU Int. Res. Orgs.
- Asia Pacific (8 partners)

- **Continue towards a sustainable production infrastructure:**
  - With infrastructure providers in Europe and around the world;
  - With new DCI technologies as they mature;
- **Provide support to current structured international research communities:**
  - Sustain current domain specific services;
  - Attract new user communities (e.g. ESFRI).

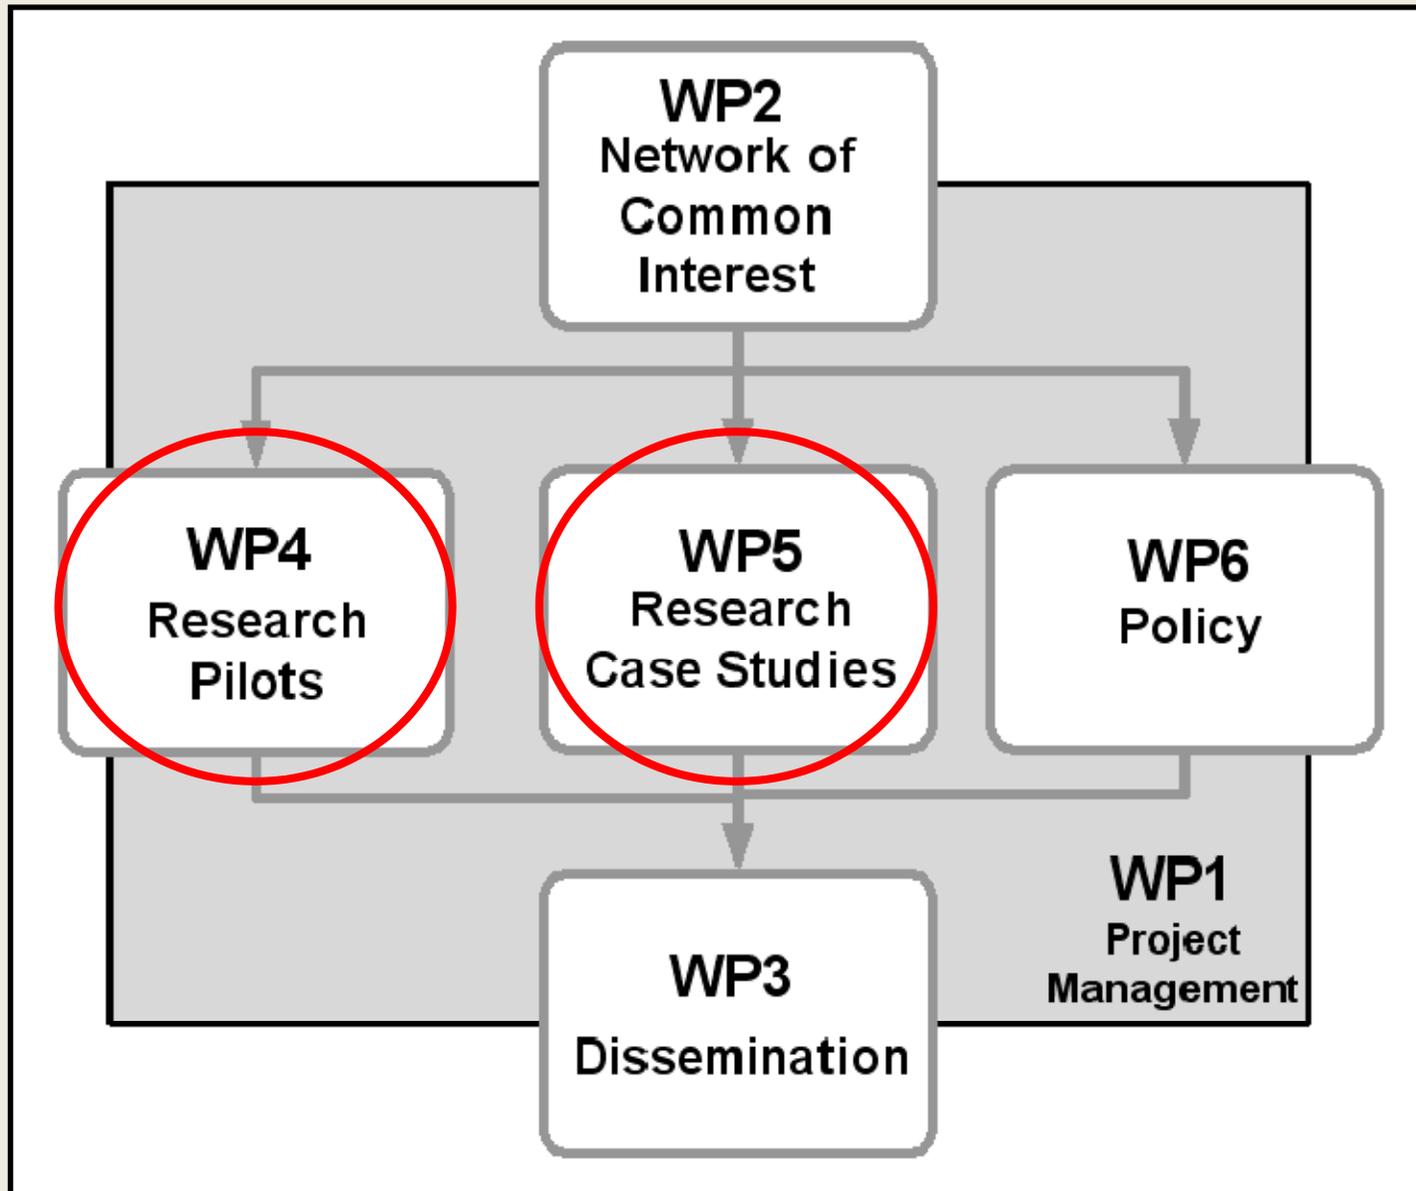

# INDICAT e-Infrastructures in the Mediterranean

- Full title: International Network for a Digital Cultural Heritage e-Infrastructure
- Support Action co-funded by the European Commission under the call FP7-INFRASTRUCTURES-2010-2
- Grant Agreement no.: 261324
- Duration: 24 months
- Start: 1<sup>st</sup> of September 2010
- Budget (Total): ~682 k€
- Budget (EC contribution): ~600 k€ (~88%)
- Person months: 113
- Project Manager: Rossella Caffo (ICCU)

- To establish a long-term network of common interest, following a tried and tested approach using working groups and high-quality publications;
- To deliver a range of demonstrators (two pilot applications and three case studies) that address the main priorities for the research in the Digital Cultural Heritage (in each case, these are not new R&D but instead the porting of existing work to the e-Infrastructure platform, with subsequent analysis and lesson learning);
- To establish the dialog between e-Infrastructure and DCH experts that are not used to work together.

- Pilot applications (WP4):

- E-Infrastructure-enabled semantic search for cultural repositories, where data aggregated for the MICHAEL project are being semantically enriched and, respective search, retrieval and publishing approaches are evaluated for porting to the e-Infrastructures platform provided by the EUMEDGRID e-Infrastructure and EUMEDCONNECT2 network.
- E-Infrastructure-enabled e-Collaborative Digital Archive protected by access control and rights management. This pilot will put in place two e-collaborative repositories: the Architectural and Archaeological Heritage present in Mediterranean Area (MED Repo) and the Federico De Roberto literary works archive.

- Research case studies (WP5):

- Digital preservation using e-Infrastructures;
- Virtual exhibitions using e-Infrastructures;
- Geocoded digital cultural content using e-Infrastructures.

No	Name	Short name	Country
1	Istituto Centrale per il Catalogo Unico delle biblioteche italiane e per le informazioni bibliografiche	ICCU	Italy
2	CONSORTIUM GARR	GARR	Italy
3	COMETA CONSORZIO MULTI ENTE PER LA PROMOZIONE E L'ADOZIONE DI TECNOLOGIE DI CALCOLO AVANZATO	COMETA	Italy
4	MINISTERE DE LA CULTURE ET DE LA COMMUNICATION	MCC	France
5	NATIONAL TECHNICAL UNIVERSITY OF ATHENS	NTUA	Greece
6	FUNDACIO PRIVADA I2CAT, INTERNET I INNOVACIO DIGITAL A CATALUNYA	I2CAT	Spain
7	CENTER FOR DOCUMENTATION OF CULTURAL AND NATURAL HERITAGE CULTNAT	CULTNAT	Egypt
8	Department of Antiquities	DA	Jordan
9	Türkiye Cumhuriyeti Kültür ve Turizm Bakanlığı	SGB	Turkey
10	AAS AVTORSKA AGENCIJA ZA SLOVENIJO DOO	AAS	Slovenia

**10 Partners from 8 Mediterranean countries**

## The COMETA Consortium ([www.consortio-cometa.it](http://www.consortio-cometa.it))

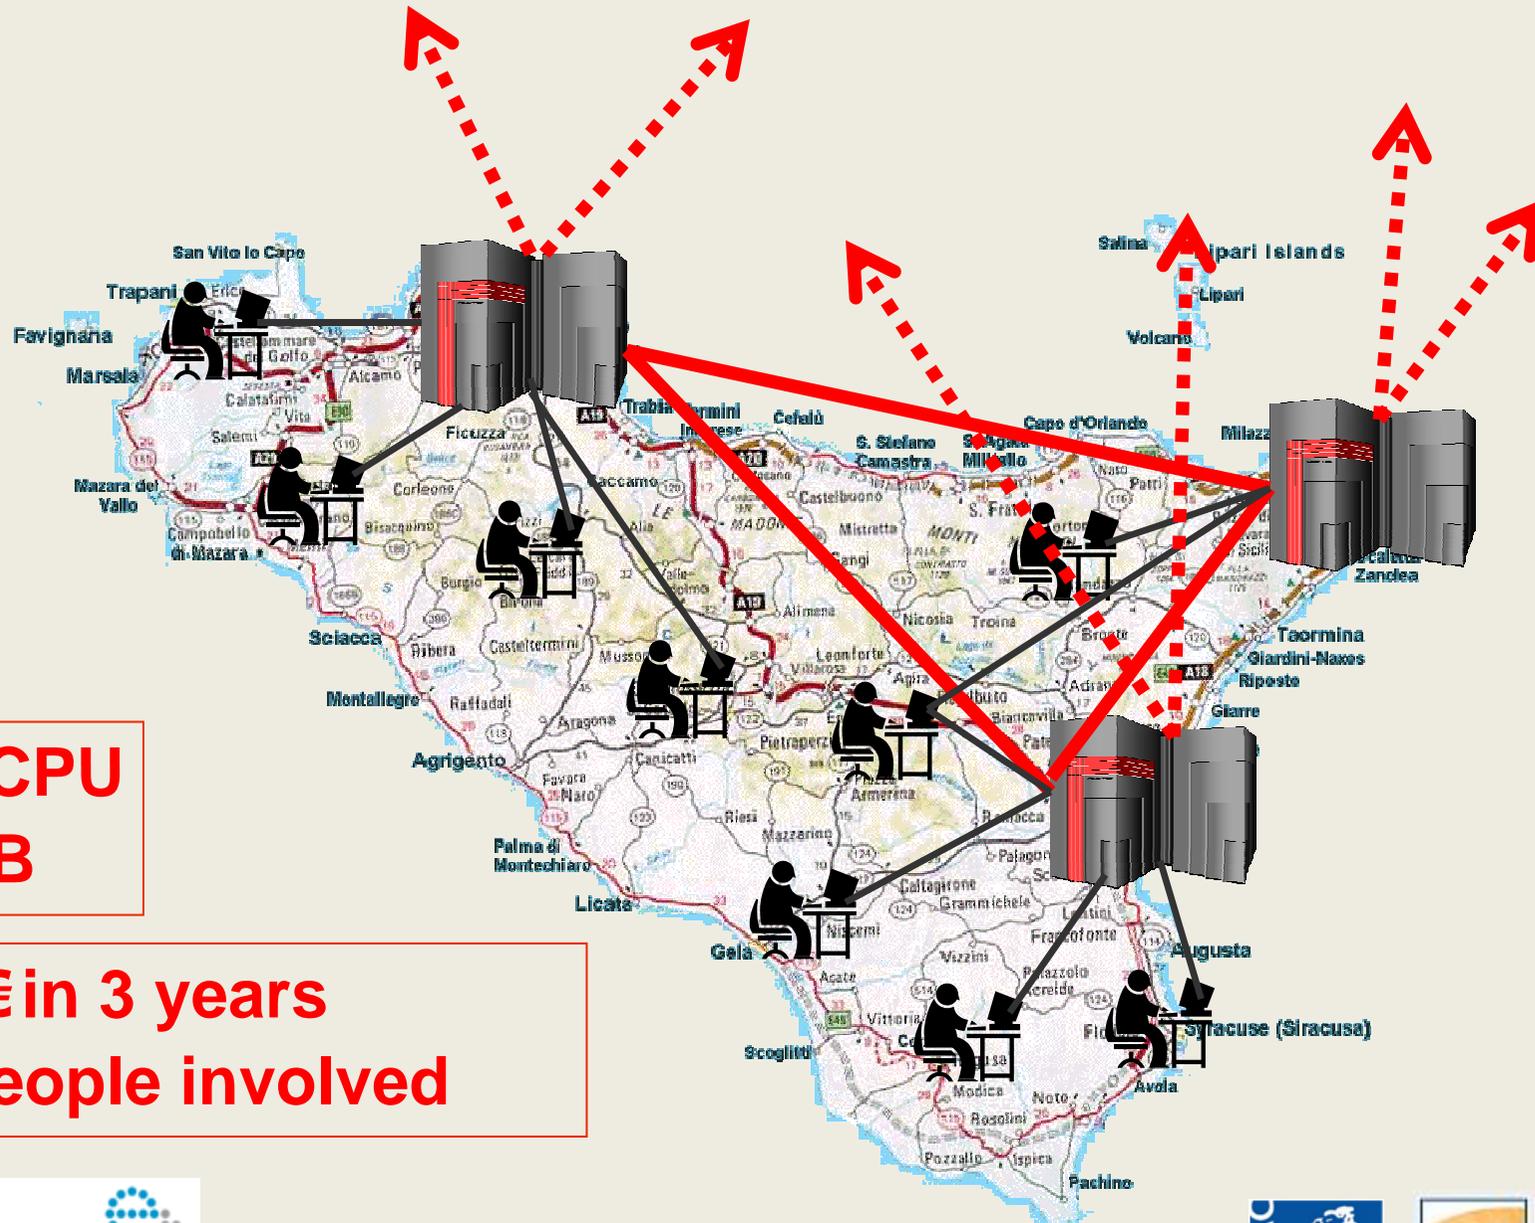

FESR

Ministero dell'Università e della Ricerca

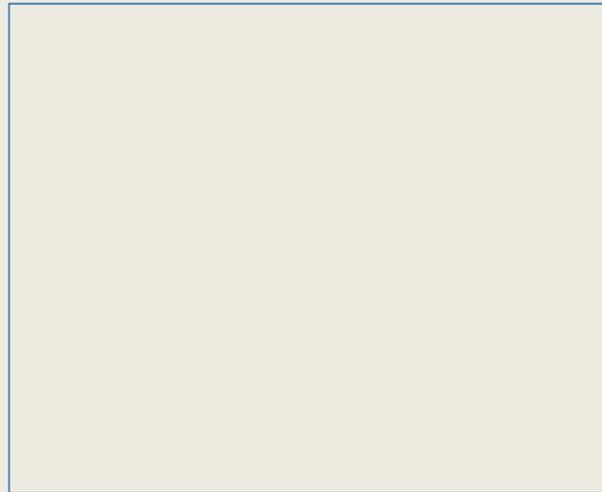

**~2000 CPU**  
**~250 TB**

**~12 M€ in 3 years**  
**>270 people involved**

1. ~2000 cores AMD Opteron 2218 rev. F
2. 2 GB of RAM per core
3. Commercial LRMS (LSF)
4. Infiniband-4X (for MPI applications)

1. ~250+ TB of storage
2. Distributed parallel filesystem (GPFS)

- A comprehensive database is available at:
  - [www.pi2s2.it/applications](http://www.pi2s2.it/applications) (**122** applications developed)

- To know more, look at:
  - [agenda.ct.infn.it/materialDisplay.py?materialId=12&confId=24](http://agenda.ct.infn.it/materialDisplay.py?materialId=12&confId=24)
  - [agenda.ct.infn.it/materialDisplay.py?materialId=20&confId=87](http://agenda.ct.infn.it/materialDisplay.py?materialId=20&confId=87)

- High performance storage systems:
  - Geographically distributed replicas of files
    - Fault-tolerant digital preservation;
- Simplified authentication systems:
  - Single sign-on;
- Fine-grained authorization systems:
  - Allow to define exactly who:
    - Individual user(s), group(s), organization(s), the whole world;
  - And what:
    - Read/edit/delete data and metadata;
    - Search, browse;
    - Creation of new repositories;
    - Role assignments;
    - Etc.

- gLibrary is the INFN/COMETA **platform** that provides a simple yet powerful system to **store, organize, search** and **retrieve** “**digital assets**” in repositories built on e-Infrastructures
  - hides the underlying technical details to the users
- What we mean by “**digital asset**”:
  - data + metadata

gLibrary uses many services  
of the European Grid  
middleware gLite

- Digital Asset of different kind (or type) are organized into **repositories**:
- “**types**” e “**collections**” definition by the administrator(s) of a given **repository**. Assets can be organized by:
  - **type**:
    - a list of attributes to describe a given kind of asset
    - hierarchical (a child type shares and extend parent’s attributes)
    - **filters**: subset of attributes queried during browsing
  - and/or **collection**:
    - group together related assets belonging to different **types**
    - useful to define subsets of assets of the same type (i.e. favorites, playlists)
    - the same asset can belong to multiple collection (sort-of tagging)

Collections

Repository

Roberto Barbera, COMETA  
Rome, 24/01/2011

- Assets are browsed selecting a **type** (or a **collection**) and then one of its **filter**:
  - attributes of the selected types/collection, chosen from a defined list, used to narrow the result set
- Filter application is cascading: the selection of a filter value dynamically influences subsequent filter values (“à la iTunes” browsing)

- Users can **upload** their local assets to one or more (i.e., creating replicas) Storage Elements of the Grid;
- **Download** from Grid storage to user PC/laptop with a click:
  - choosing a replica from a list:
  - **future functionalities: storage maps, closer storage;**
- Transfers (handled over HTTPS) are authorized by the digital certificate imported into the user's browser:
  - only authorized users can download a given assets;
  - guest access is supported through **robot certificates**.

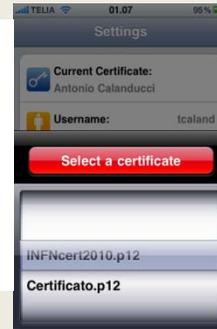

- Mobile interface to access Grid-based Digital Libraries:
  - *iPhone, iPod Touch, iPad;*
- Advantages:
  - provides an extremely **intuitive** and **touch-based** user interface to Grid storage elements and metadata, especially for non-expert users;
  - (to do) automatic selection of the closest replica, according to the user physical location retrieved by the integrated GPS;
  - offline access to the assets already downloaded.

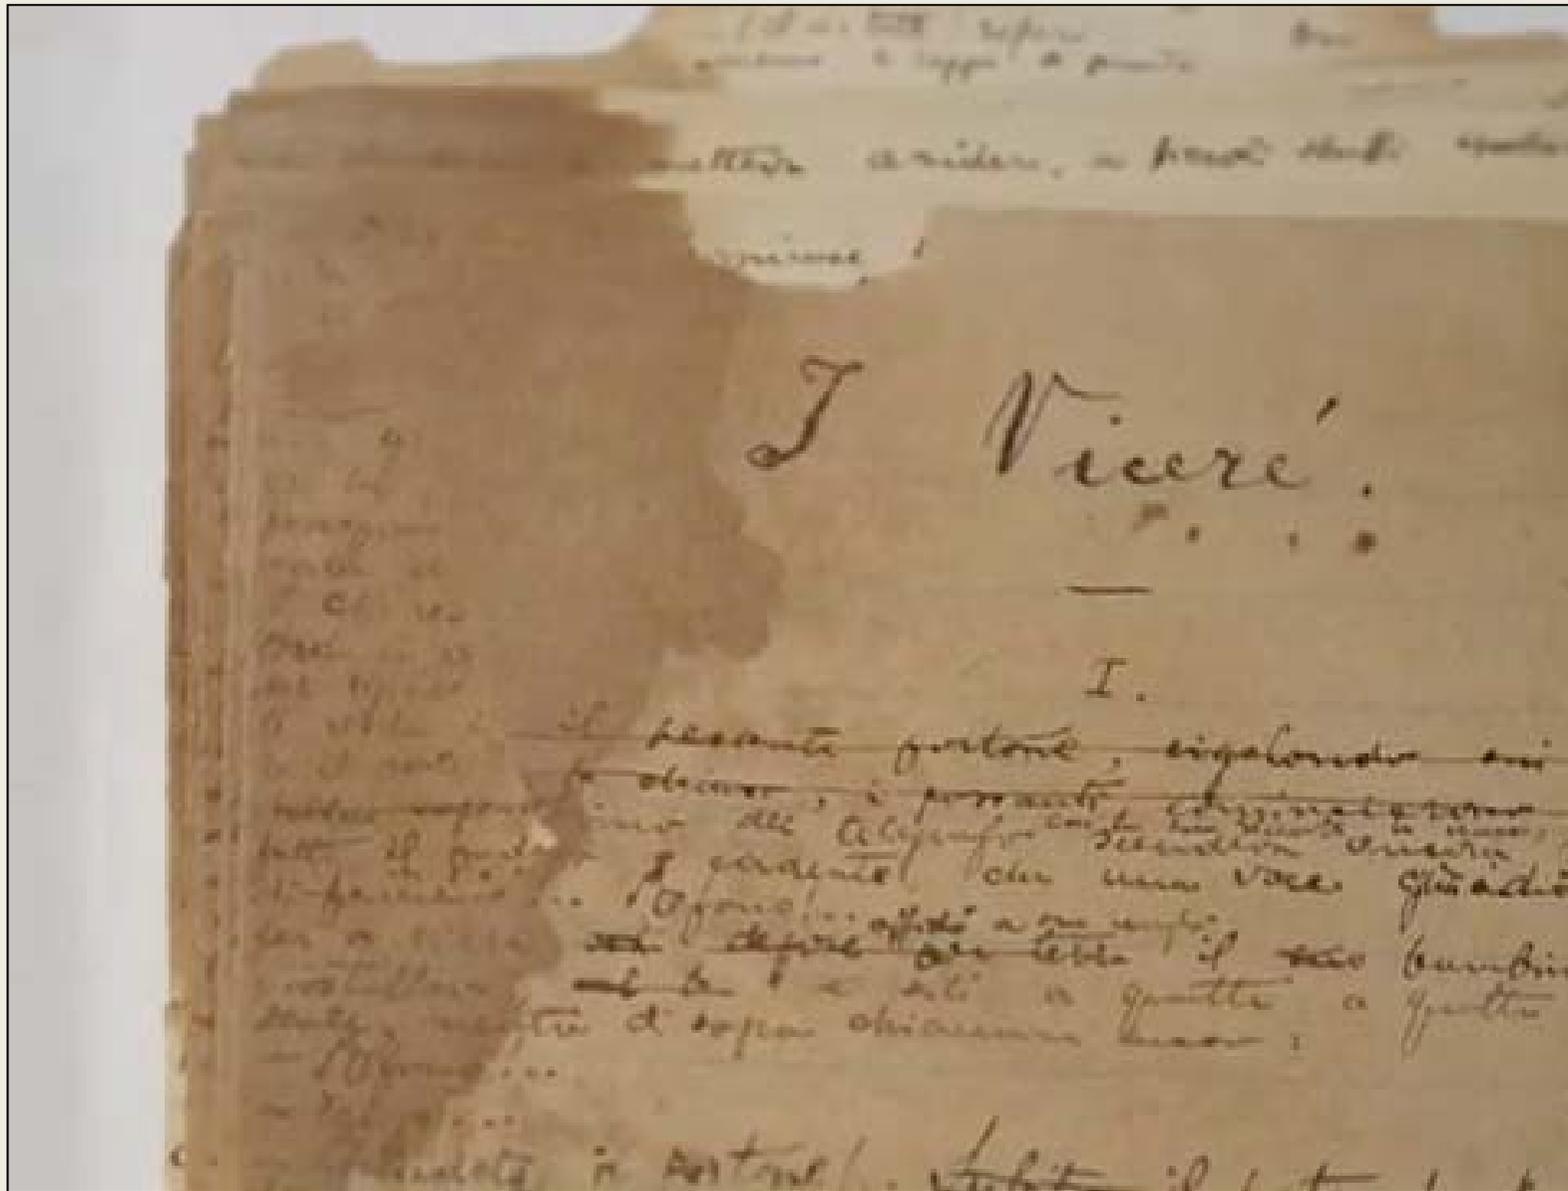

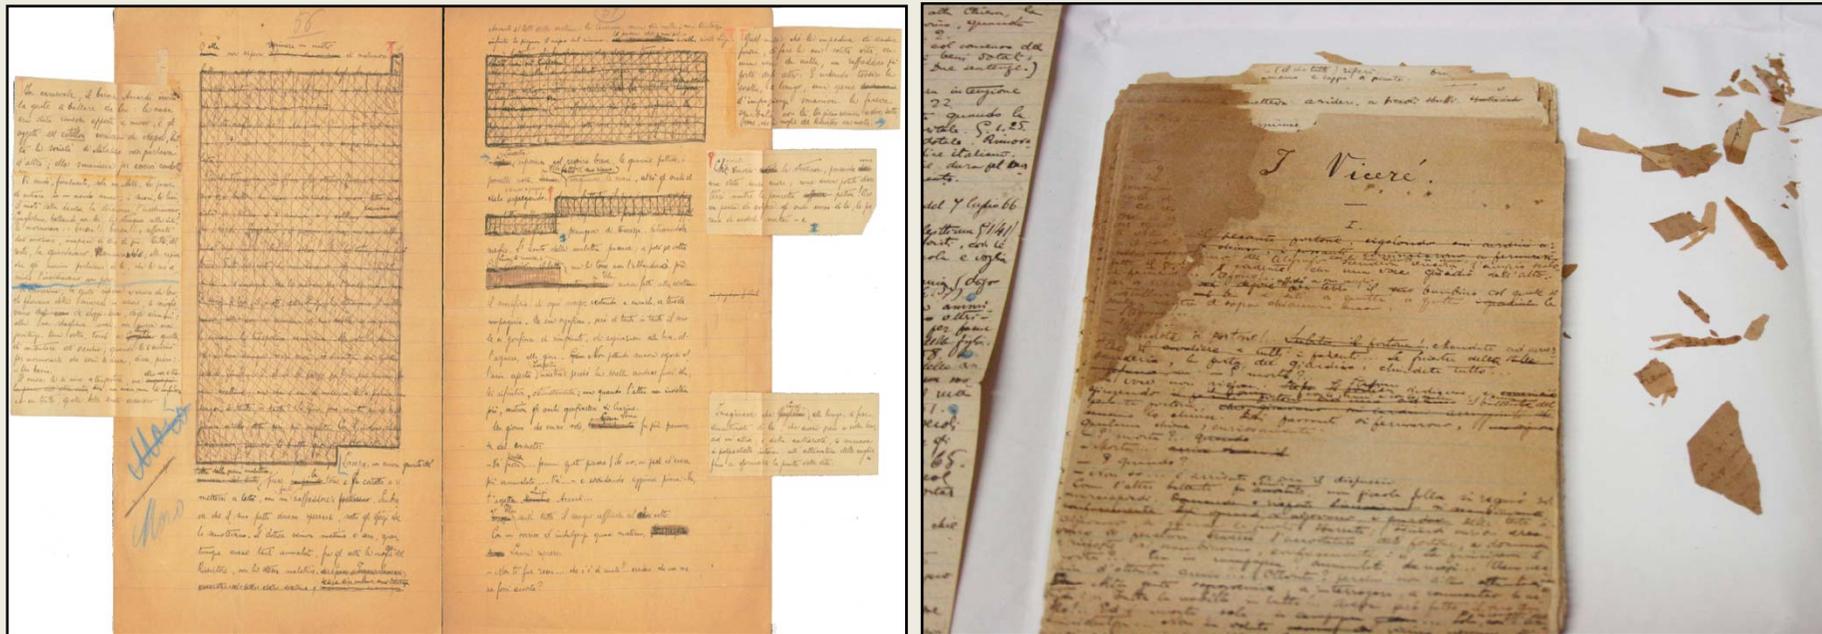

**Download and  
select a X.509  
Certificate**

# INDICAT A use case: Federico De Roberto works

- Some sheets are damaged (mold, crumbed pieces) and need physical restoration;
- Digitisation is mandatory to avoid the loss of this heritage; some works are still unpublished and relevant for the humanistic community.

- Digitalization of manuscripts, typescripts, printed works:
  - TIFF Files, one per page, 600 dpi, about 100 MB for A3
    - High resolution scans for in-depth examination;
  - PDF, one per work, 300 dpi, varying file sizes 40-400MB
    - Overall examination of works;
  - 8000 sheets/scans, 3 Terabyte of disk space;
  - Different physical formats, A3/A4/custom size;
- Embedded Metadata:
  - TIFF with embedded metadata to provide scan physical features and information about the content:
    - ImageWidth, ImageHeight, XResolution, FileSize, CreationDate, ModifyDate
    - Description, Keywords, CaptionWriter, Title, Author, Copyright Status, Copyright Notice;
  - Added with Photoshop after the digitisation phase (Adobe XMP format).

- Make manuscripts accessible to the humanistic community
  - Always on-line: 24 x 365
  - Available from everywhere
  - Simple and easy-to-use interface for non-expert people
- Quickly find the desired document
  - Document organization according the physical and semantic metadata
    - Organization by type/collections
    - Dynamic filtering of search result sets according the selection of one or more document metadata
- Long-term preservation (digital preservation)
  - Multiple copies (replicas) spread over different geographical sites
  - Reliability of storage systems and replica redundancy to achieve real preservation

- Goals:
  - store the 8000 scans of De Roberto Heritage
    - > **Data Grid Storage Elements**
  - enable an ubiquitous and 24/24h access to scientists
    - > **Web Application**
  - document organization for a quick search
    - > **Metadata Services**
  - long-term digital preservation of data
    - > redundancy through **Replicas** of files on several Storage Elements
  - simple and easy-to-use system for searches, organization, upload and download of digitalized documents on the Grid ----->

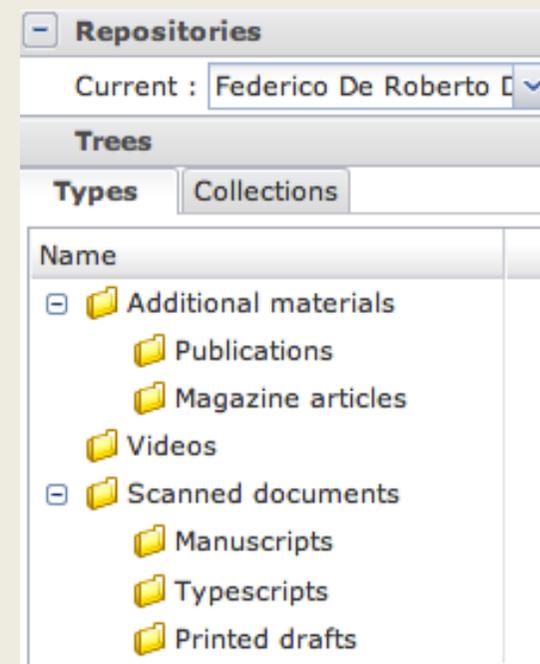

- Web 2.0 standards:
  - Javascript/AJAX/JSON on the client side;
  - PHP5 classes to implement business logic on the server side;
- Grid technologies:
  - Storage Element SRM interface to get the TURLs (Transfer URLs);
  - Transfers handled with GridFTP and X.509 cert auth HTTPS;
  - X.509 based Globus Security Infrastructure with the VOMS extensions to handle authentication and authorization (ACL based) on Metadata and Storage Elements;
  - All grid services implemented with the EGEE gLite middleware (DPM Storage Elements, AMGA Metadata Catalogue, LFC File Catalogue, VOMS Services);
- Other standards:
  - Subset of XMP Metadata:
    - Dublin Core Metadata set will be included in the next release:

- **Type** tree definition for the DR repository
- **Attributes** definition per type (e.g., manuscripts):

Attribute	Value
Title	la lupa
Author	federico de roberto, giovanni verga
Description	manoscritto della tragedia lirica ...
Keywords	verismo, federico de roberto, la lupa, ...
CaptionWriter	stefania iannizzotto, alessandro ...
CopyrightStatus	Copyrighted
PageNum	5
TotalPages	34
DocumentGenre	tragedia lirica
PublicationYear	1916
Publisher	officine tipo-litografiche barravecchia e balestrini
FileType	PDF
Resolution	300
ScanQuality	good

**Filter** defined per type.

### Examples:

- DocumentGenre
- Title
- FileType
- ScanQuality
- DocumentType
- PublicationYear
- Publisher
- Location

The screenshot shows a web browser window with the URL [http://glibrary.ct.infn.it/glibrary\\_new/browse.php](http://glibrary.ct.infn.it/glibrary_new/browse.php). The search bar contains the text "cultural heritage". The page header includes the "DE ROBERTO digital repository" logo and navigation links: home, browse, search, upload, and logout. There are also logos for INFN, eSee, GLite, and other institutions.

The interface features a left sidebar with "Repositories" (Current: Federico De Roberto) and "Trees" (Types: Collections). The "Types" section is expanded to show "Scanned documents" with sub-items: Manuscripts, Typescripts, and Printed drafts.

The main content area has a "Filter attributes" section with dropdown menus for Title, FileType, Author, and ScanQuality. Below this is a "Values" section with corresponding dropdown lists. The "Add Filter" button is highlighted with a green plus sign.

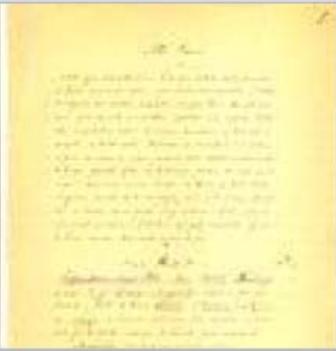

The search results are displayed in a table with the following columns: Thumb, FileName, Title, Author, Description, PagNum, FileType, and Document. The results show three entries for the file "002\_la\_lupa.tif", "003\_la\_lupa.pdf", and "003\_la\_lupa.tif", all titled "la lupa" by "federico de roberto". The descriptions are identical, mentioning a manuscript of a tragic opera by Pierantonio Tasca, published by Officine Tipo-litografiche Barravecchia e Balestrini in Palermo in 1919.

Thumb	FileName	Title	Author	Description	PagNum	FileType	Document
	002_la_lupa.tif	la lupa	federico de roberto	manoscritto della tragedia lirica in due atti, musicata da pierantonio tasca, pubblicata da officine tipo-litografiche barravecchia e balestrini, palermo 1919; altre edizioni: noto, tipografia rosario caruso, ottobre 1932; conservato presso la biblioteca di storia patria per la sicilia orientale	2	TIFF	tragedia

# INDICATE COMETA vs. DC-NET and INDICATE

- COMETA and DC-NET:
  - COMETA has signed a Cooperation Agreement with DC-NET;

- COMETA and INDICATE:
  - Develop an e-Culture Science Gateway (eCSG) with general user authentication and authorisation schemas;
  - Make two Digital Cultural Heritage pilot use cases available through the eCSG:
    - Digital Repository of Federico De Roberto works (De Roberto DR);
    - Digital Repository of the Architectural and Archaeological Heritage in the Mediterranean Area (MED Repo).

# INDICATE The INDICATE Virtual Organisation

Robot certificates have been introduced to allow users, who do not have/want personal certificates and do not belong to any Virtual Organisation, to use the Grid; they are usually issued on smart-cards to be plugged on the machine where the service(s) is(are) executed.

Basically, these certificates can be used to identify a person responsible for an unattended service or process acting as client and/or server for a Virtual Research community.

INDICATE

Pilot Applications

- De Roberto DR
- MED Repo

INDICATE will deliver two pilot applications:

- E-Infrastructure-enabled semantic search for cultural repositories, where data aggregated for the **MICHAEL project** are being semantically enriched and retrieval and publishing approaches are evaluated for porting to the e-infrastructures platform provided by the **EUIMEDGRID** e-Infrastructure and E
- E-Infrastructure-enabled e-Collaborative Digital Archive protected by access control and rights management. This pilot will put in place two e-collaborative Digital Archives: the **Architectural and Archaeological Heritage present in the Mediterranean Area (MED Repo)** and the **Federico De Roberto literary works archive**.

The pilots will be accessed by the research community via an e-Cultural Science Gateway that will provide users with an easy-to-use web interface, a search mechanism, with both centralized and federated authorization mechanisms.

INDICATE

Pilot Applications

- De Roberto DR
- MED Repo

**De Roberto Digital Repository**

- Acronym: De Roberto DR
- Name: Digital Repository of Federico De Roberto works
- Domain: Cultural Heritage
- Status: S4 ([Learn More](#))

**APPLICATION DESCRIPTION**

Federico De Roberto, an Italian writer of the XIX/XX century, left many works of relevant value to the humanistic community digitized by La.m.u.sa team, a group of researchers from the Faculty of Letters and Philosophy in Catania. With gLibrary, this cultural heritage, replicated on several storages in a grid, will be preserved and it is now accessible to everyone

- MED Repo

**Digital Repository of the Architectural and Archaeological Heritage in the Mediterranean Area**

- Acronym: MED Repo
- Name: Digital Repository of the Architectural and Archaeological Heritage in the Mediterranean Area
- Domain: Cultural Heritage
- Status: S3

**APPLICATION DESCRIPTION**

The Mediterranean Network for Cultural Heritage aims at creating a distributed digital repository for more than 7,100 items of cultural heritage belonging to about 20 countries around the Mediterranean (besides Italy). The initiative's idea was born from the awareness that peoples of the Mediterranean established an osmosis of knowledge, over the millennia, through cultural and social exchanges which enabled the "Community of the Mediterranean area" that goes well beyond the geographical boundaries. The continuous exchanges carried out in the past are visible on the shores of the Mediterranean, where even today there are architectural and archaeological military, religious, and civil heritages belonging to different traditions but with obvious stylistic and geometric similarities. The initiative has been undertaken by the Digital Architectural Archaeological Cultural Area (DA2rCA) team of researchers at the Department of Architecture and Urbanism of the University of Catania (Italy) and the first pilot project has been funded by the Centre for Design and Restoration of Palermo to determine a risk map of the famous archaeological area of Taormina. The pilot project consisted of the acquisition of hundreds of 3D laser scans and thousands of pictures of about 30 monuments located in the Taormina's area and the creation of a digital repository.

	010_la_lupa.tif	la lupa	federico de roberto	manoscritto della tragedia lirica in due atti, musicat...	10	TIFF	tragedia		

At the bottom of the table, it indicates 'Page 1 of 1' and 'Displaying 1 - 50 of 50'.

**Federico De Roberto DR on Liferay.  
Very preliminary!**

- INDICATE represents a concrete attempt to demonstrate the usefulness and effectiveness of e-Infrastructures for Digital Cultural Heritage;
- COMETA is one of the Grid resource providers of the Italian e-Infrastructure and, through it, of the European Grid Infrastructure;
- COMETA has a long experience in developing services for Virtual Research Communities, also in the field of Digital Cultural Heritage;
- The gLibrary framework is entirely based on gLite, one the most adopted middleware in the world;
- In the context of DC-NET and, mainly, INDICATE projects, COMETA will concretely show, through exemplar use cases, how Grid infrastructures can effectively be used by the Digital Cultural Heritage community in a simple and intuitive way.

- Proposal for an INDICATE Service Challenge:
  - Authorize the INDICATE Virtual Organisation in the Grid Storage Element of at least one Grid site of each project country;
  - Upload digitised contents of the Storage Elements and federate them through the definition and implementation of a common metadata schema (better if the contents have logical/cultural relations among them);
  - Create the digital repository with gLibrary with different user profiles (visitor, managers, creator, etc.) having different access privileges;
  - Ask the INDICATE end-users (and the general public, through a dedicated dissemination activity) to access the digital repository and provide feed-back;
- Time frame to prepare and run the Service Challenge: the next 6-8 months (in order to be able to report on its outcomes at the First Project Review);
- **Are any of the Italian Organisations cooperating with DC-NET willing to take part in the Service Challenge (as e-Infrastructure providers, data providers, or end users) ?**

**Thank you for your attention**
